

# Self-Control Assessment Tool

Over fifty years ago, Stanford University researchers used the 'Marshmallow Test' to determine how much self-control children of different ages could exhibit. After tracking these test subjects into adulthood, researchers found that self-control was the most powerful predictor of their adult success over IQ and socioeconomic status. Take this assessment to determine your level of self-control.

Directions: Read each statement below and decide how it applies to the way you feel about yourself. Add down each column. Then, add across the columns to get a final total.

Questions	3 points <b>ALWAYS</b>	2 points <b>USUALLY</b>	1 point <b>SOMETIMES</b>	0 points <b>NEVER</b>
1. I enjoy arguing with people.				
2. I express all of my feelings.				
3. If I think something someone says is stupid, I tell them so.				
4. If I am angry, I act like it.				
5. My mouth gets me in trouble a lot.				
6. I do things just to get attention.				
7. Sometimes I provoke people just for the fun of it.				
8. My feelings get hurt easily.				
9. I hate being wrong.				
10. I say things that I regret later.
